

District 3 Town Hall

Agriculture & Environment

Allow grow/ ag in rural residential 1/2-1 acre in up = attention to environment

Please discriminate between organic and artificial fertilize pesticide agriculture

Radio frequency interference from grow lights degrades all radio and electronic devices. This is regulated by the federal communications commission. Local attention could help with the probation and avoid fee involvement. Affect commercial public safety radio, Wi-Fi-fi, cable etc.

Most concerned with watershed pollution. Best practices: Punish and enforce

Organic/ in the sun

Treat odor control like noise complaint

Allow zoning R1, R2, RR, AG

Allow commercial and industrial areas. Do not allow commercial growing in residential or rural residential neighborhoods

Permits for senior to grow to support expenses/provide work/enhance quality of life

Ag land is for Ag cannabis is agriculture

Rural cottage growers less than 1 acre should have separate allowances

2500 sf parcel is = good for all

Allow AR zoning

Cultivation should not be allowed in RRI area too many children and family concerns

LEA, LIA, DA Williamson Act

Smell can be controlled with filters

I am concerned with noxious smell involved in cultivation

I feel cultivation should be restricted to warehouse type operations - air quality needs to be controlled

Almost all cannabis is a GMO. What about that?

"Redirection of water to grow areas will affect well water and ground water levels. This is a big issue for those of us on wells.

Med/Commercial grow operations belong in agricultural zoned areas, not any type of residential areas"

Rural/residential grows ok. Safety addressed

Too far gave already 14,000 grows 13,000 permits

Electronic filters to prevent radio interference

Setback grows 150' from lakes and streams

All zoning R1, R2,RR, AG

Do not allow cultivation in RR zones! We have a pot farm next door I am worried about water table. Worried about water quality, fire, and safety and concerns

Emphasize grows in DA zoned areas

No personal growing of cannabis make to a professional industry

Don't allow commercial growing in rural areas

Ag exemptions for cannabis operations such as greenhouses

Not what I voted for or how it was put forth. Regulate now, tax now

Define commercial according to cottage industry laws. Sale compliant growers cause no more threat to public safety

A more specific number of plants that are legal defined and clean

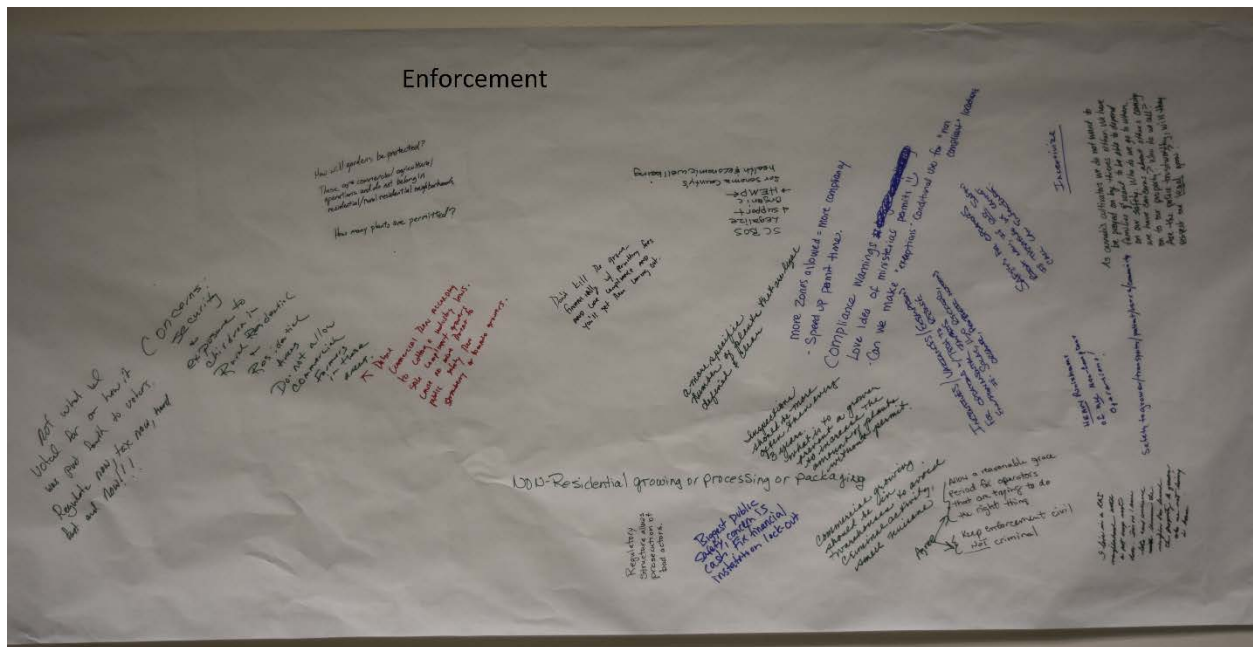

More zones allowed = more compliancy speed up permit time.

Compliance warnings love idea of miniseries permits. Can we make exceptions conditional use of non-compliant locations

Potential Economic Opportunity: Be the premiere testing facilities of cannabinoids all of them and the values of each towards beneficial medicine. Not marijuana or cannabis all of them

Please allow commercial growing in rural residential areas. 2 acres is not much land to cultivate on

Enforcement

Concerns: security and exposure to children in rural residential and residential areas. Do not allow commercial farms in these areas

How will gardens be protected? These are commercial/ agriculture operations and do not belong in residential residential/rural neighborhoods. How many plants are permitted?

Don't kill the grower financially w/permitting fees and compliance and you'll get them coming out

A more specific number of plants that are legal defined and clean

Non-residential growing or processing or packaging

Commercial growing should be in warehouses to avoid criminal activity, smell nuisance

Inspections should be more often than every 3 years. What is to prevent a grower to increase the amount of plants without permit

SC BOS legalize and support organic hemp for Sonoma County's health and economic well-being

Regulatory structure allows prosecution of bad actors

Allow a reasonable grace period for operators that are trying to do the right thing. Keep enforcement civil not criminal.

Incentives/exemptions/ variances for operators that have tech to reduce environmental impacts e.g. solar, recycling water

Safety for operators right now, if our safety is therefore we cannot call can enforcement

Heavy punishment of all non-competent operations

I live in a RRI neighborhood with a pot crop next door. I am concerned because the neighbor has the property and are not living in the house

Regulatory structure allows prosecution of bad actors

As cannabis cultivators we do not want to be preyed on by thieves either. We have families want to be able to depend on our safety. Who do we go to when we have concerns about other coming on to your property? Who do we call? Will police respect out legal

Safety to grower/transporter/patient/users/community

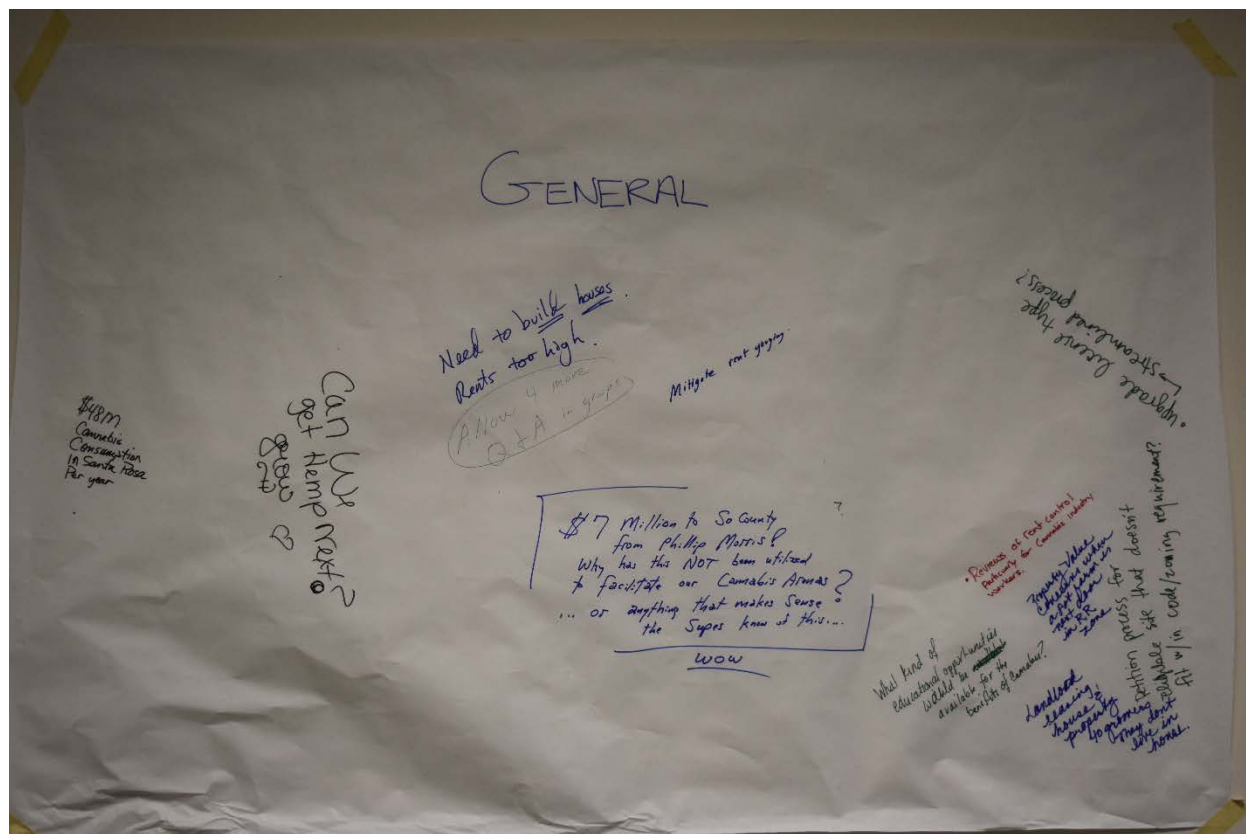

More zones allowed = more compliancy speed up permit time.

Compliance warnings love idea of miniseries permits. Can we make exceptions conditional use of non-compliant locations

Commercial growing should be in warehouses to avoid criminal activity, smell nuisance

Biggest public safety, concern is cash. Fix financial installation lock-out

General

\$48M cannabis consumption is Santa Rosa per year

Can we get hemp next? Grow.

Cannabis has the safest LD50 dose known of any plant. Peppermint is more dangerous, so is chocolate.

Education, programs and packing alliance to support same

In Colorado out of 5.6 million pop only 16 cases of children hospitalized in 2015 due to accidental consumption of consumption

Lock boxes for medicine. Bring patients (elderly) to dispensaries w/ educational classes or educational staff members

Non-OMRI organic or certified pesticides and/or fertilizers should not be allowed in production fertilizers

Dispensaries not in neighborhoods with houses

Accidental ingestion by children is a big concern because in candy and baked good. Big cost to society needs to taxed high

Water and use quality for homes on wells with grower next door

Lower mg doses on labels. Labeling of cannabis/marijuana biggest on label

Children and accidental - regulate guns, alcohol, and prescription medicine too many kids are facing so many other concerns

No candy-like substances

Why are these poisonous pesticides even legal? The dangerous stuff should be outlawed completely. You don't need it to grow awesome.

Outreach program founded by tax revenue

No gummies bears, brownies and other "goodies" go to pill form in appropriate containers

Concerned about pregnant women need education. Also impacts on MH indies.

Schools and use of med MJ by children can go to school

[illegible]

Not what I voted. Regulate now, tax now

Permits increase revenue for county not permitting will reduce our current revenue and impact economy permit as many as we can

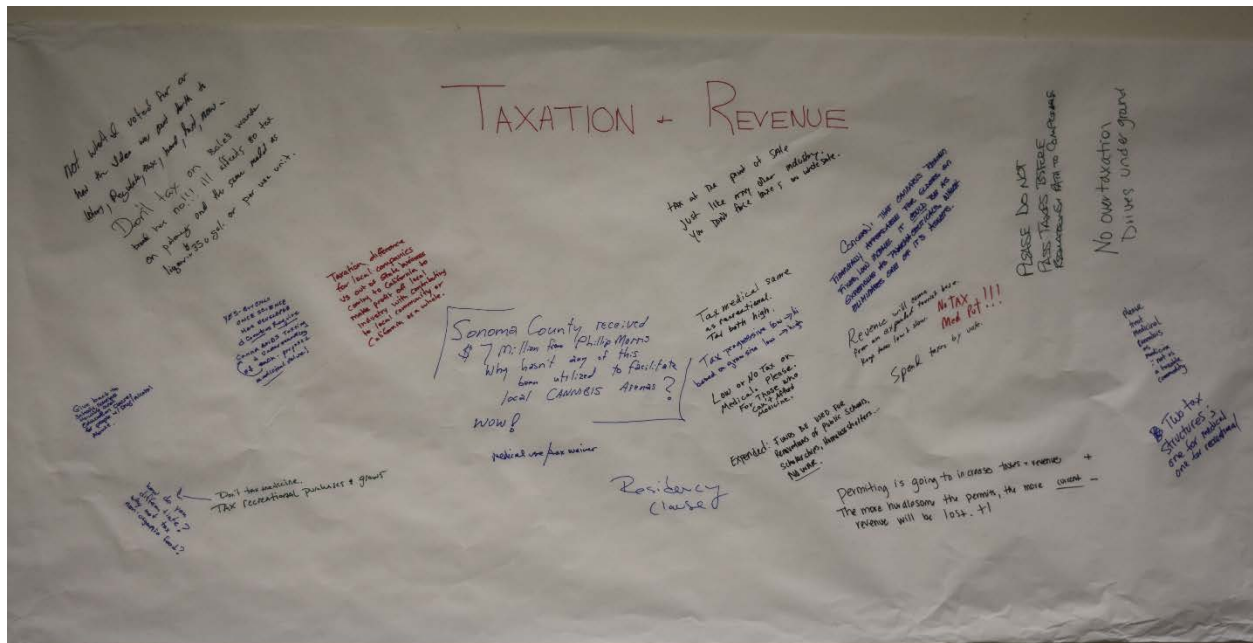

Allow existing businesses grandfathered status priorities on permits

The more jobs the better

Cannatourism and positive promotion

Estimated \$140M in annual cannabis consumption in Sonoma County

Taxation & Economy

Not what I voted for or how forth to regulate, tax, fast now

Don't tax on sales wonder bread has no!! Ill effects so tax on potency and the same model as liquor \$35 a gallon or per use unit

Yes, but only once science has developed and counted require cannabinoids testing and understanding of each other purported medicinal valves.

Taxation differences for local companies vs out of state business coming to California to make profit off local industry with contributing to local community or California as a whole

Tax at the point of sale just like any other industry. You don't face taxes on wholesale

tax medical same as recreational. Tax both high

Low or no tax medical for those that can't afford medicine

Expended funds be used for renovations of public school scholarships, homeless shelters. No war

Residency clause

"Pros: Permitting is going to increase taxes and revenues

Cons: The more hurdle some the permits, the more revenue will be lost"

Spend taxes by vote

No tax med pot

Two tax structures; one for medial one for recreational

Please treat medicinal cannabis as medicine, not as a taxable commodity

Concern that remains financially affordable for elders on fixed, low income. It could be as expensive as pharmaceuticals which eliminates one of its assets

Revenues will come from expanded tourist base. Keep taxes low and slow.

Please do not pass taxes before regulations and path to compliance

No over taxation drives underground

Medical use/ tax waiver

Give back to schools, homeless housing and education classes for people w/ drug/ alcohol abuse

Sonoma County received \$7 million from Philip Morris. Why hasn't any of this been utilized to facilitate local cannabis arenas?
